

Resichem 556 Clear Cladding

Resichem 556 Clear Cladding is a single component water-based masonry treatment which when applied to porous surfaces forms an invisible water repellent barrier. Unlike conventional systems, Resichem 556 Clear Cladding does not seal the surface but instead its micro-emulsion based chemistry penetrates deeply into the pore structure where it forms a hydrophobic lining. This lining stops any further ingress of moisture while allowing any moisture vapour inside the structure to be released.

By this means Resichem 556 Clear Cladding provides long term protection against water penetration even against wind driven rain.

Features of the product include –

- Water based
- Simple to mix and use
- Hydrophobic lining
- Application by brush, roller or spray
- 10 year + protection

Benefits to the user include –

- Long term protection of key assets

Typical Applications include –

- Concrete, stone and brick structures

Brick stairwell sealed with 2 coats of 556 Clear cladding

Concrete wall sealed with 2 coats of 556 Clear cladding
